

# angel TREE MISSION

## *The Hodges Family*

### **Battling: 9-year-old, Angelina**

Angelina was first diagnosed with Optic Nerve Glioma when she was 18 months old. Although she rang her “victory bell” when she was 5, they recently found evidence of progression of the disease this past summer. Now age 9, Angelina’s treatment plan includes chemotherapy through the end of this year at MD Anderson. She’s already been through so much in just 9 years; brain surgery, three port surgeries & over 50 MRI’s.

They continue to pray that this will soon come to an end and Angelina will be cancer-free for life.

*This year we join together to help this family  
have a wonderful Christmas!*
